Rüsch

CrystalClear Plus
Tracheostomy Tube

Supports Effective Tracheostomy Care

The single-use Rüsch CrystalClear Plus Tracheostomy Tube portfolio from Teleflex comprises of cuffed and uncuffed tracheostomy tubes, which are sold with two single-use, flexible inner cannulas. The range is ideally suited for a new Tracheotomy stoma, 'first tube in' situations. Manufactured from thermo-sensitive PVC tubing, and with a thin, flexible, PVC flange, Rüsch CrystalClear Plus Tracheostomy Tubes have been designed for patient comfort and effective stoma care[1]. The flexibility of the flange enables it to conform to the anatomy with minimal skin contact, when a stoma dressing is not required; it also helps to minimise tube movement during care, and provides ease of access to the stoma site for cleaning, to help reduce the risk of infection[2].

Designed with Patient Safety in Mind

Rüsch CrystalClear Plus Tracheostomy Tubes have size-specific colour-coded flexible inner cannulas that correspond to coloured writing on the flange. This helps to avoid the inadvertent use of an inappropriately sized inner cannula, which could increase 'work of breathing' and potentially compromise patient safety. Moreover, the flexible inner cannula can be removed and replaced, helping to prevent the accumulation of biofilm and secretions, which could occlude the outer cannula and restrict ventilation. Additional safety features include a swivel on the 15 mm connector to reduce torque on the ventilator circuit, and the 95° curvature of the tube, which facilitates a secure fit in new stomas to reduce the risk of accidental decannulation.

Benefits

The Clinician
Colour-coded inner cannulas aid size identification, for increased peace of mind

Your Institution
Designed to reduce the risk of inadvertent tube displacement in the intensive care unit

The Patient
Design features assist in maintaining a patent airway
